## MasterExpert Yale Electropick Set

Code: EM-007

It is known by everyone that the cordless lock pick is the key maker's only friend, by moving hundreds of times per second, reaching the ability to hit, which cannot be done by hand, and opening the lock easily. We have redesigned our cordless lock pick and made it a unique product with additional features. We can list the differences of our MasterExpert model Rechargeable lock pick from the previous one as follows:

- The capacity and assembly of the rechargeable battery used has been improved. A new generation Lithium-ion battery was used as a rechargeable battery. The charging time of this battery is short and the usage time is almost doubled.

The better news is this:

The battery is not mounted inside the device. A battery slot has been made and when it is desired to be charged, it can be removed and continued to work with a spare. The charging unit, on the other hand, works with the help of a USB cable, such as a mobile phone cable, and this cable is also supplied with the set. You can even charge the batteries by getting electricity from the car cigarette lighter. The battery level indicator lamp on the charging unit will also provide you with great convenience.

- The device's LED lamp has been updated.

The LED lamp of the charged device will start working while you are using it, thanks to the software inside the device, and will turn itself off 5 seconds after you finish your work. Thus, unintentional flashing of the LED lamp has been prevented, negatively affecting the battery's charge life.

- The engine power of the device has been increased. It is now much easier to open 6-pin cylinders with rechargeable devices. Because the battery used is a new generation battery and the current power of the battery is increased with a special device, the rechargeable device makes much stronger hits than before.

- Supplied with rich material-equipped auxiliary tools and a stylish tool bag. The case of the rechargeable device has been redesigned. A more useful and stylish bag has been prepared, and a rich set has been prepared with plenty of Yale charging tips, various clasps, drawer and latch lock picks.

### Yale ElectroPick Blade Set CODE: MUS-1

These are different models of pick blades designed to use in the Master's Yale Cordless Pick tool. Made of hardened steel and presented in a portable case with plastic dividers.

- 11 pieces of Dimple Pick Keys
- 1 Fiyam Pick
- 1 Magnetized Pick Holder
- 2 packs of spare wires
- 2 packs of Aluminum foils
- Spare Makita battery
- Makita charger

\* Supplied with a specially manufactured case

## Tilting Window Opener

Code: TWA-01

It is designed to open tilted windows from outside. One of the issues that locksmiths pay attention to when they go to the service is whether the place has an open window. Because, entering through a gap or an open window will be easier and more harmless than opening the door.

Particularly, the probability of finding half-open windows is quite high. This product will help you a lot to enter the house from the window by opening the semi-open tilted windows fully and will help you reach your goal. It is not possible to open the windows that are kept half open from the outside. In order for the window left open by tilting to open normally, the window must first be brought to the fully closed position. Then the handle should be rotated to the horizontal position while the window is in the vertical position.

Otherwise, the window cannot be opened. Although it does not seem possible to perform these operations from the outside, these operations are possible with this product. When the window is in the half-open position, our opening device is placed on the window handle located in the space next to the window. Then, the window is closed by pulling it outwards with the help of the suction cup. Then the ribbon attached to the apparatus is pulled like a tow rope and power is supplied to the apparatus. Thus, the apparatus attached to the window handle returns the window handle to its normal open position. The half-open window opens easily from the outside.

### Lever Pick Jackknife-12 Blades

**Code: MLV-12**

This 3-lever jackknife tool set is a convenient and practical tool. It has 12 x 3-lever blades that are thin enough to enter bullet warded locks and are suitable for opening the majority of 3-lever locks including Gibbons, Legge, Union and Yale. The Door Release Wizard is designed to assist in the safe and non destructive opening of any door locks which have been locked as a result of pulling. The handle of the it is made of black colour plastic and 0.15 mm thick stainless steel. The metal part is a bit longer than the other and 0.20 mm. produced with a special process so that a locksmith do not cut his hands.

**SH-16**

**SH-16K**

**SH-18**

**SH-18K**

**SH-20**

## Reverse-Door Release Wizard

Code: SH-22

The Reverse Door Release Wizard is designed to assist in the safe and non destructive opening of any door locks which have been locked as a result of pulling. Doors usually open inwards. However, some doors open outwards ie. fire door, emergency exit doors, security doors, etc. Existing opening wizards cannot work in such doors. The Reverse Wizard Opener designed to open such doors is very successful. The handle of the it is made of black plastic and 0.20 mm thick stainless steel. The metal part is produced with a special process so that a locksmith do not cut his hands.

## Latch Opening Needles

Code: SH-300

It is designed to open unlocked doors whose keys are left in the house. The thickness of the wires is ø15 mm and produced in four different shapes. It is extremely easy and quick to open the latch of the door lock with the Z wires produced in different shapes and sizes. The most suitable model is selected from the set. The wire is inserted horizontally to reach the latch through the appropriate gap of the side of the door to be opened. Then, it is lifted upwards and the latch is intervened. Thus, since the door is not locked, it opens very easily and without damage.

## Drawer Lock Pick-Double Sided

Code: FCM-11

Drawer locks allow quick opening of employee cabinets, filing cabinets and more. It almost feels like you have a second key. This pick is very easy to use and does well with both single and double sided wafer style cabinets and cam locks. Made of highly flexible and hardened stainless steel. It is compact and practical.

## Thumb Turn Lock Pick

Code: MKM-02

This pick is designed to open German type thumb-turn locks and is made of good quality steel. When using it, you should make sure that the notched part is facing up. The product enters through the lock hole of the cylinder like a key, you can perform a successful door opening operation by gently moving it all the way back and pulling it a bit forward after all the way back in some locks. Since it is designed like a key and is lighter than it, you can easily carry it both in your pocket and in your tool box. It is an ideal product for any locksmith.

## Jackknife Allen Set and Star Crusher

Code: JAS-08

The jackknife allen set was specially produced by Master Technic for you. There are 2 - 2,5 - 3 - 4 - 5 - 6 mm Allen key and a flat screwdriver bit and one Phillips screwdriver bit (which is star lock crushing bit) are available.

# **CRACKER & PULLER**

## **Professional Cracker and Puller Full Set**

**Code: 5-IN-1**

It is a very special locksmith set produced by Master Design Ltd, which includes many specially designed tools and comes with a stylish tool bag.

These crushing sets contain:

- Cylinder Crusher (KIR-35L)
- Round Breaker (BK-40L)
- Cylinder Crusher and Tube Puller (KIR-35X)
- Frill Crusher (FF-04)
- Rosette Snapper (RKP-3)
- Cylinder Crusher (KIR-35L)
- (\*) Supplied with an aluminum bag

Super light cylinder crusher tool with very light aluminum handle which used in common with other crushers, as well as 6L allen key. It provides convenience when carrying it.

The head is made of hardened steel and the mouth is lock cylinder shaped. After the tool is inserted into the part of the cylinder protruding from the door, the bolt on the side is tightened with the allen key. Specially designed sharp channels are made inside the apparatus to prevent the roller from being scraped during use.

### **• Round Braker (BK-40L)**

You can easily break tubular cylinders (circulation or closing locks) with this apparatus. With this tool, after grasping the cylinder from the outside, it is tightly tightened from the side screw. It squeezes the barrel with the collet system and breaks it in a few moves.

### **• Cylinder Crusher and Tube Puller (KIR-35X)**

It combines the functions of many tools that perform the cylinder crushing or tube pulling process in a single body.

### **• Frill Crusher (FF-04)**

Steel frilly steel rosettes are used on many doors. While there is a protective ruffle in front of the steel badge, it is not possible to break the badge. This product is designed to break the frills of steel badges. Due to this tool's design, it is even used for crushing rosettes.

### **• Rosette Snapper (RKP-3)**

It is designed to break steel badges. It is made of special steel. Since it is designed to be very light, it provides convenience to locksmiths in carrying the tool.

Grasps the ruffle slot in the rosette well. Due to its special counter screw head, it is fully locked into the rosette. Thanks to its strong grip jaws and levers, it easily breaks the steel badge from its screws. It can also be applied to recessed and standard rose.

## **Screw Holder Tool**

**Code: MPK-501**

Magnetic ElectroPick Key Holder is a special design product. The pick key holder tool is manufactured hexagonal corners on the bottom to compatible Makita drills. Also, a high-gravity metal magnet is embedded in it.

### **The most important feature:**

is that the screw head gets stuck inside the apparatus. So, the star drill bits does not slip. Alos, it is ensured that it does not damage the screw head and the drill bit. Thus, the puller screw is screwed in more strongly and smoothly.

## **Easy Screw Holder No.1**

**Code: MSH-11**

It is a very important auxiliary tool of cylinder pulling tools. It is a product for facilitating pulling screws No-1 to cylinder cores. The screwing process can be done much easier and controlled.

### **The most important feature:**

As the head of the screw will be inside the apparatus while applying the Pulling Screw Number-1, the screw does not slide to the side of the targeted point and the screw turning bits do not come back. So, you can screw the puller screw into the cylinder core more forcefully and smoothly.

## **Easy Screw Holder No.2**

**Code: MSH-12**

It is a product for facilitating pulling screws No-2 to cylinder cores.

**MASTERPICK**

## Tube Pulling Set

Code: HX-01

The tube (core of lock) extraction method, known as the most effective and ideal locksmith method in door locks with rosettes, is a real solution for locksmiths and locksmiths.

This special tool developed for locksmiths and allows to remove all kinds of lock cores (German, round and oval) easily and harmlessly. So, it enables the door to be opened quickly without damaging the door or door body.

By pulling the lock tube, quick and easy access to the clay locking mechanism is provided. It is also possible to remove the cylinder core itself.

Due to the special screws in the set that can withstand tons of loads, the pulling process is completed in a few steps. Screwing size markings on the screws allow the screwing process to take place without damaging the lock assembly.

This tool can be used with dimple locks or germen cylinders or half cylinders. It is very effective when emergency opening is required. It can be used very easily on steel, wooden, aluminum or plastic doors. The device works with a center-oriented pulling mechanism. There is lateral support during tube pulling.

Specially produced steel pulling screws are used in the tube pulling device. These special pull screws prevent the lock from bending or breaking.

## Palm Size Tube Pulling Set

Code: HX-03

The lock core removal method is the most efficient and ideal method for unlocking escutcheon doors. This method is a real solution for locksmiths and many locksmiths know and apply this method very well. This tool enables easy and harmless opening of all types of locks (German, round and oval). In addition, although the cylinders that are in line with the outer face of the door do not have a protrusion that the breaking apparatus can hold, the locks can be opened easily with this tool. It is especially effective for locks that need to be opened in an emergency. The key tube in the middle of the door lock can be easily removed with this tool with the help of a specially reinforced screw. Thus, it enables the door to be opened quickly without damaging the door and door body. The difference of this tool from its counterparts is that it is small enough to fit in the palm of any locksmith and is incredibly light. So, it will not cause weight in tool bags that you will be strengthened, R & D studies. More-over, it performs more effective operations than its counter parts. It is a product 100% satisfied with. The pipe pulling screws supplied with this tool are specially and the success of the lock core in pulling the pipe has been determined by

## Power Cracker Set

Code: KIR-35L

This super light cylinder cracker/snapper from Master Pick features a lightly hardened aluminum alloy construction and ribbed inner profile for grip. Supplied with 6 mm allen key to adjust the tool.

Feature:

- Extra light
- Supplied in a protective and hard-wearing case
- Aluminum alloy construction

## Tube Puller & Cylinder Crusher Set

Code: KIR-35X

It is a patented product designed by Master Technic Ltd. It combines of two apparatus, barrel cracker and tube extraction in a single body. Thus, you will not have to take separate apparatus for the lockpicking process wherever you go. You will save time and do several jobs with a single apparatus.

### INSTRUCTIONS FOR USE:

Step 1: Make a hole to the keyway by mounting the thin size screw (No-1, Blue colour) by help of the hexagonal screw holder tool in the set to the cylinder core.

Step 2: Then, widen the first hole bed again by using the middle size screw. (No-2, Gold colour).

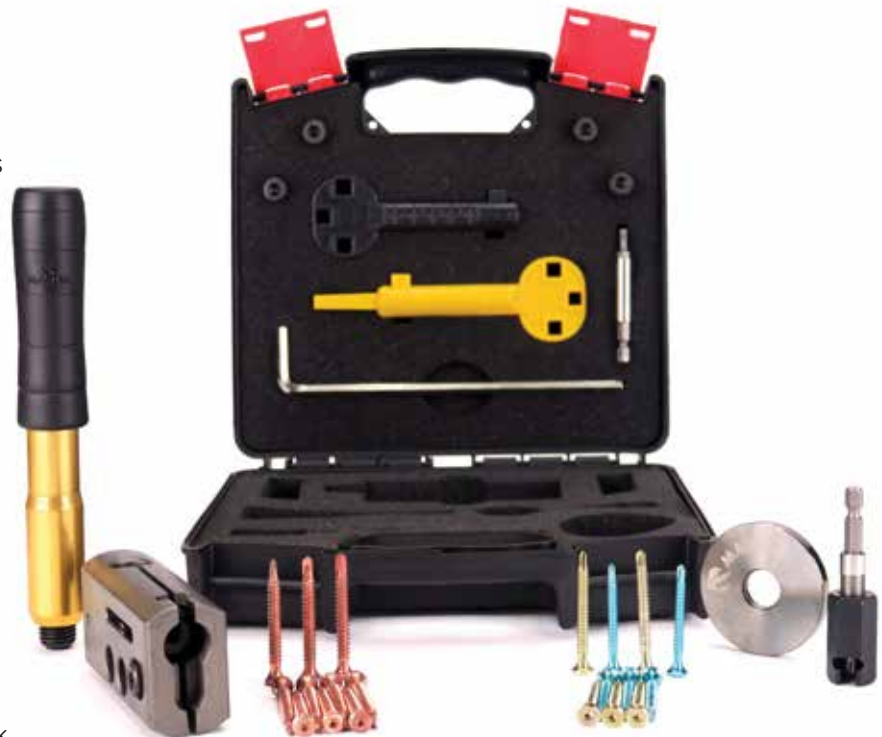

Step 3: Screw the No-3 (Titan colour) thick screw into the cylinder core where the sufficient width is opened.

Step 4: Place the outer part of the screw no.3 (Titan colour) mounted on the lock core into the screw slot in the movable inner mechanism of the KIR-35X product and turn the hole at the rear of the KIR-35X product and remove the space at the rear of the KIR-35X product and remove the space and remove the triple lock corescrew-tube pulling tool. confine each other.

Step 5: Insert the screw number 3 (Titan color) into the lock core so that 2/3 part is in the center of the cylinder. Place the Steel Disc on the outside of the cylinder. Place the remaining part of the screw into the screw socket located inside the KIR-35X tool and reset the gap by turning the rotary knob on the back.

Step 6: Pull the inner mechanism of the KIR-35X product by turning it with the allen in the set and pull the lock core. You will see that the lock core easily comes out by breaking the pins.

Step 7: You can open the door with a screwdriver or similar tool that you will use inside the empty lock core.

## Triple Cracker Set

**Code: 3-IN-1**

This Super Light Crushing Set consists 3 different tools; Badge Breaker, Cylinder Crusher and Round Breaker tools.

Special alloyed aluminum handle produced by Master Technic is widely used in these three different products. The handle is very light and making it easy to carry.

In addition, the 6L allen key supplied with the set is also widely used.

Set Content:

- Cylinder Crusher (KIR-35L)
- Round Breaker (BK-40L)
- Rozette Breaker (RKP-3)

All three products are made of hardened steel and Master Technic Ltd. It was specially designed by.

## Key Guard Crusher

**Code: FF-04**

Most doors or units have key hole guard for lock hole made of steel on the badges to prevent locks from being broken or destroyed by force. In order to break the steel badge, the protective key hole guard for lock which is in front of it must be broken. While the steel rozette/badge has a protective key hole guard for lock hole in front, it is not possible to break the badge.

This patented product is designed as a very important aid to break the key hole guard of badges. You can easily break steel key hole guards thanks to the Key Hole Guard Crusher in different sizes designed by carving out of solid steel. It is possible to interfere with the lock core and steel rosette by breaking the steel key hole guards. Due to its design and strong structure, it can also break the existing steel rozette/badge while breaking the key hole guards.

# **CRACKER & PULLER**

## **Rosette Cracker**

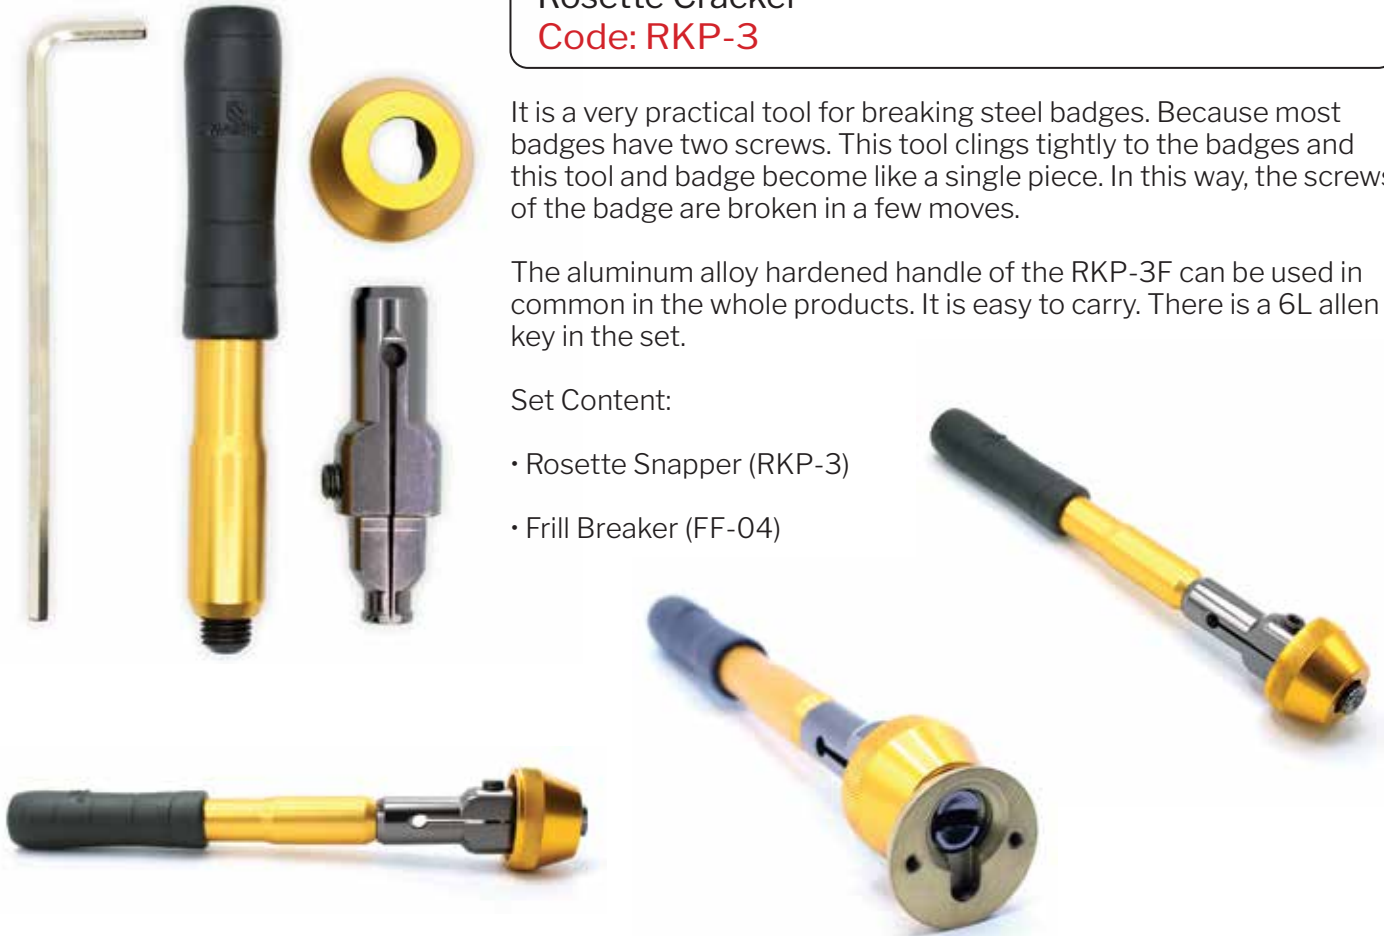

**Code: RKP-3**

It is a very practical tool for breaking steel badges. Because most badges have two screws. This tool clings tightly to the badges and this tool and badge become like a single piece. In this way, the screws of the badge are broken in a few moves.

The aluminum alloy hardened handle of the RKP-3F can be used in common in the whole products. It is easy to carry. There is a 6L allen key in the set.

Set Content:

- Rosette Snapper (RKP-3)
- Frill Breaker (FF-04)

## **Triple Cracker Set w/Key Guard Crusher**

**Code: 3-IN-1F**

## Cross Lock Cracker Bit

**Code: FMK-02**

It is a cracker apparatus for Cross Locks. It is suitable to work with Dimple Lock ElectroPick Gun and Manuel Cross Cracker Tool. This is very practical tool to crack a cross (star) lock.

It is attached the drill or manuel cracker and work on the cross lock a bit to right side and a bit to left side until it breaks the lock.

# CRACKER & PULLER

## Super Light Double Cracker Set

Code: 2-IN-1

It is designed to crush or break the Cross Lock cylinder whose key is lost or defective. It is operated manually.

One cracker blade/pick (FMK-02) supplied with the set is attached to the tip of this tool and placed on the cross lock. Then, with the help of the tool, the cross cylinder is quickly turned to the right and left to break it.

## Oval Cylinder Cracker Set

Code: OV-35

This tool is designed to crack oval cylinders. This oval cylinder cracker is made of hardened steel and the handle is made of hardened aluminum alloy.

It has a ribbed inner profile for easy grip. In this way, even at a very short distance of 2 mm, it grips the cylinder very tightly and performs the breaking operation with great success.

This tool is positioned to grip the entire circumference of the cylinder to be broken. The side screw of the tool is tightened with a 6L allen key. Due to the collet system in the tool, it grips the cylinder very tightly. The cylinder is easily separated from its body by turning it to the right and left with the breaking tool. Supplied with a 6 mm allen key to operate the tool.

## Dual Round Cylinder Cracker for ø24 mm (0,95") & ø26 mm (1")

Code: BK-24T

It is a product designed to break round cylinders of different sizes with a single apparatus. One end is for ø25 mm – ø26 mm cylinders and the other side is for ø24 mm – ø25 mm cylinders. The head is made of hardened steel for durability, and the handle is made of super-light hardened aluminum, which can be used with other products.

## Round Cylinder Cracker ø26mm (1")

**Code: BK-26**

This tool is for locks with a diameter of ø26 mm (1") This super light cylinder cracker made of hardened steel while the handle made from hardened aluminum alloy. It finished with ribbed inner profile for easy gripping. In this way, even at a very short distance of 2 mm (0,07"), it grips the cylinder very firmly and performs the breaking process with a great success.

This tool is placed in such a way that it grips the entire circumference of the cylinder to be broken. The side screw of the tool is tightened tightly with a 6L allen key. Due to the collet system in the tool, it grips the cylinder tightly. The cylinder is easily separated from its body by turning it to the right and left with the breaking tool. The lock is unlocked by inserting a flat screwdriver into the cavity of the broken cylinder and turning it. Supplied with 6 mm allen key to operate the tool.

## Round Cylinder Cracker ø22 mm (0,87")

**Code: BK-22**

This tool is for locks with a diameter of ø22 mm (0,87") This super light cylinder cracker is made of hardened aluminum alloy construction. It finished with ribbed inner profile for easy gripping. In this way, even at a very short distance of 2 mm, it grips the cylinder very firmly and performs the breaking process with a great success.

## Round Cylinder Cracker ø28mm (1,1")

**Code: BK-28**

This tool is for locks with a diameter of ø28 mm (1,1") This super light cylinder cracker made of hardened steel while the handle made from hardened aluminum alloy. It finished with ribbed inner profile for easy gripping. In this way, even at a very short distance of 2 mm, it grips the cylinder very firmly and performs the breaking process with a great success.

## Round Cylinder Cracker ø32mm (1,25")

**Code: BK-32**

This tool is for locks with a diameter of ø32 mm (1,25") This super light cylinder cracker is made of hardened aluminum alloy construction. It finished with ribbed inner profile for easy gripping. In this way, even at a very short distance of 2 mm, it grips the cylinder very firmly and performs the breaking process with a great success.

## CRACKER & PULLER

### Cue Pinned Round Cracker $\varnothing 22 - \varnothing 32$ mm (0,87"-1,25") Code: BK-11

The Cue Pinned Round Cylinder Breaker Set is produced for cracking the round cylinders with diameters from  $\varnothing 22$  to  $\varnothing 32$  mm. With the help of the pins at the end of the tool, a (0,87"-1,25") hitting the round cylinder to be broken. A depth such that the pins will go inside is prepared by drilling over the cued with a drill. Then you can break the cylinder by inserting the pins into the drilled holes and then shaking them left and right. It has distinct differences compared to its counterparts. It is much more useful and designed to tolerate target shifts that may occur during screwing. In addition, it is a great advantage that the back of the pins is a cue pinned. So, even if the cue pin is broken, your work will not be left unfinished. With this product, you can open round barrel locks very easily and confidently.

### Pulling Screw No.1\_Blue $\varnothing 4,2$ mm (0,16")

Code: M-V1

A very good quality screws from Master Pick to suit the all types of cylinder core puller tools. This screw is durable and colour coded according to its size. It is blue in color and has a diameter of  $\varnothing 4,2$  mm (0,16"). Cylinder pulling is a lifesaver operation for locksmiths. Performing the cylinder pull is depend on the screw. The more the screw works better, the more the locksmith succeeds. This screw doesn't let you have a shame! Because, it has been manufactured by special hardened alloy metal and as self-drilling screw. So, please compare its robustness and usefulness with similar products on the market.

Some locksmiths use screw no-3 directly after applying screw no-1, or apply screw no-2 first and then apply screw no-3. This method will work for 4-pin and 5-pin cylinders. However, in 6 and 10 pin cylinders; when you first apply the screw no. 1, then the screw no-2 and then the screw no-3 respectively, you will have a more successful operation and you will use the same screws over and over. It can be purchased individually as well as comes in many Master Pick tool set.

Colour code and sizes:

Blue  $\varnothing 4,2$  mm (0,16") (First to apply) Gold  $\varnothing 4,8$  mm (0,19") (Second to apply) Titan  $\varnothing 5,8$  mm (0,23") (Last one and the puller)

### Pulling Screw No.2\_Gold $\varnothing 4,8$ mm (0,19")

Code: M-V2

A very good quality screws from Master Pick to suit the all types of cylinder core puller tools. This screw is durable and colour coded according to its size. It is golden in color and has a diameter of  $\varnothing 4,8$  mm (0,19").

### Pulling Screw No.3\_Titan $\varnothing 5,8$ mm (0,23")

Code: M-V3

A very good quality screws from Master Pick to suit the all types of cylinder core puller tools. This screw is durable and colour coded according to its size. It is titan in color and has a diameter of  $\varnothing 5,8$  mm (0,23").

MASTERPICK®

## Plastic Cylinder Cam Turning Key CODE: BAB-17

It is a tool designed to open the lock after the cylinder has been broken. There are two different types. The yellow one has a conical tip, the black one has a straight tip and a ruler is placed on the body of both.

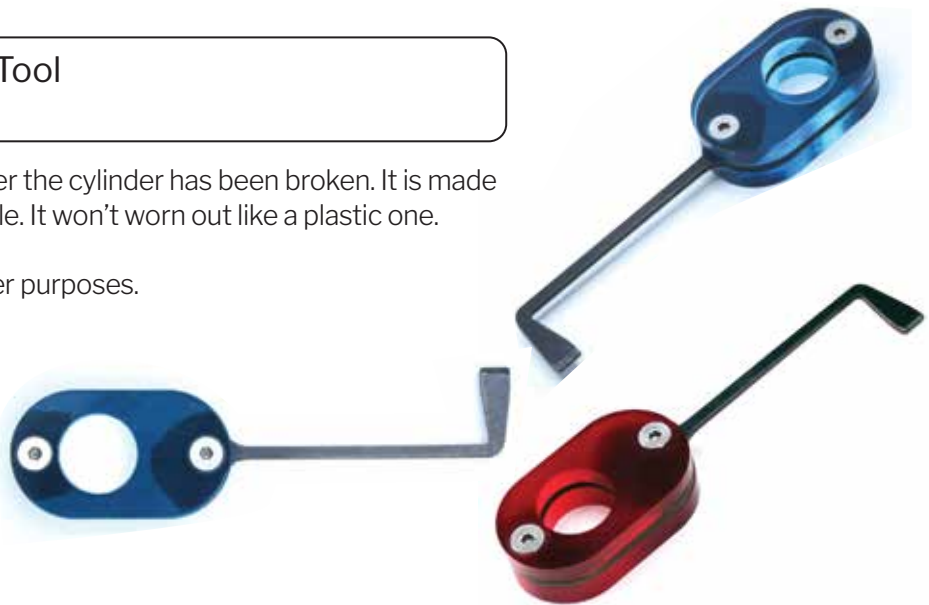

This product has four functions:

- 1- It is used to control the locking mechanism of the broken cylinder with a cylinder breaking apparatus such as KIR-35X or KIR-35L.
- 2- Since the tip is conical, the cylinder controls both spring tongues of mortise locks,
- 3- Controls the espagnolette and window handles.
- 4- It helps to determine the most suitable cylinder size for the door with a ruler on it.

## Steel Cylinder Cam Turning Tool CODE: BAB-18

It is a tool designed to open the lock after the cylinder has been broken. It is made by stainless steel with a very sleek handle. It won't worn out like a plastic one.

Also, you can use this tool for many other purposes.

## Toggle Ratchet CODE: CIR 19-A

Some of the Master Professional Pick cracking tools are used with "Allen Key" and some with "Ratchet Wrench". Thanks to this adapter, which is designed by our company, when you cannot find the "Allen Key" in your tool box, you can use your Ratchet as a 16-inch Allen Key by attaching this adapter to your "Ratchet wrench". It's a conversion adapter of the ratchet wrench to Allen-6. This adapter, which is a marvel of design, will increase the function of your tool.

## Professional Car Opener Full Set CODE: PRO-X5

MASTERPICK It provides great convenience in opening the doors of different models of cars with professional auto pulling sets specially prepared for car locksmith masters. There are more than one method of opening the doors of the cars (from glass gasket, through the door, from the lock core, etc.). ## High Security Car Pick Full Set

Code: GT-X

It is a very useful product designed by MASTERPICK. The picks in the set are compatible with all pantograph locked cars. There are picks to fit most of the pantograph cars. Due to its specially designed screw structure, it can be applied in right and left channel locks. It consists of three parts, with a fixed middle part and side parts that can reversibly to the right channel and left by turning and flipping upside down.

The tips of the pick that hit to pins can stretch independently. So, it gives more convenient during opening operation. It does not damage the keys of the lock and can be removed even when the tube of the lock is turned. There are twelve auto picks in four different widths as 5 mm, 6 mm, 7 mm and 7.5 mm in the set.

## High Security Car Pick Full Set w/Car Flipper

Code: GT-XP

It is a very useful product designed by MASTERPICK. The picks in the set are compatible with all pantograph locked cars. There are nine auto picks in four different widths as 5 mm, 6 mm, 7 mm and 7.5 mm in the set which covers almost all kind of brand car of Asia group and as well as European group. There are picks to fit most of the pantograph cars. Due to its specially designed screw structure,

it can be applied in right and left channel locks. It consists of three parts, with a fixed middle part and side parts that can reversibly to the right channel and left by turning and flipping upside down. The tips of the pick can stretch independently. So it works more easily during opening. It does not damage the keys of the lock and can be removed even when the tube of the lock is turned. There is a Car Flipper Gun which can be used to bypass two-turn and three-turn locks. There are nine vehicle lock picks in four different widths as 5 mm, 6 mm, 7 mm and 7.5 mm in the set.

## High Security Car Pick Set

Code: GT-22

This product is for opening cars with high security lock system. There are 4 picks, 1 tension tool in the set a 1 pistol-shaped Car Flipper/Spinner.

How to use:

Attach a pick and a tension tool of your choice to the lock hub. Slightly tighten the tension tool in the opening direction. Move the car pick slightly back and forth and up and down at the same time. When you feel the lock core turning very slightly during use, reduce the compression of the tension a little more. If you turned the lock core to the locking direction, not the opening direction, you can open the lock by jumping in the opening direction with a gunshaped jump. For brand vehicles Audi, VW, Scoda, Seat, Porsche, BMW etc.

**High Security Car Pick Set**  
**Code: GT-11**

It is a set used to open cars with high security lock system. The car tension used in the opening process is also available in the set. It can be easily used in vehicles with brands such as Audi, VW, Scoda, Seat, Porsche, BMW etc.

**High Security Guitar Pick Set**  
**Code: GT-01**

The picks that look like guitars in this set are for opening cars with a high security locking system. There is a car tension in the set. It is for Audi, VW, Scoda, Seat, Porsche, BMW etc. It consists of two pin strikers connected to a fixed single body. The pin striker on both sides can hit the lock pins independently of the other. Therefore, it is easy to work during operation. It does not damage the vehicle lock and can be removed even when the lock core is half turned.

**High Security Car Pick Set**  
**Code: GT-11**

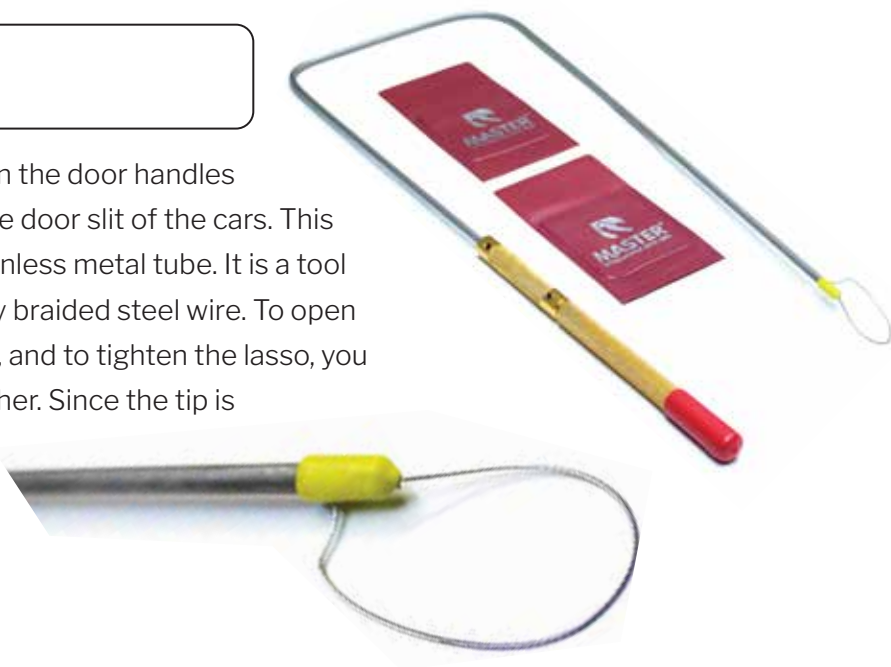

The picks that look like guitars in this set are for opening cars with a high security locking system included Car Lock Spinner Gun. There also is a car tension in the set. It is for Audi, VW, Scoda, Seat, Porsche, BMW etc. It consists of two pin strikers connected to a fixed single body. The pin striker on both sides can hit the lock pins independently of the other. Therefore, it is easy to work during operation. It does not damage the vehicle lock and can be removed even when the lock core is half turned. It is very easy to turn the locks of some vehicles in the locking direction. The lock of the vehicle can be quickly turned in the opposite direction or clockwise with the Car Spinner Gun included in this set.

## Car Opener Lasso-Short

Code: OM-50K

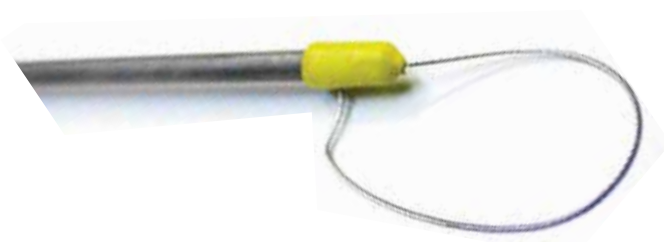

The super flexible opener is used to open the door handles and safety pins by inserting it through the door slit of the cars. This set is made of a very special flexible, stainless steel tube. It is a tool with a lasso knuckle at the end of a finely braided steel wire. To open the lasso, you must connect the handles, and to tighten the lasso, you must separate the handles from each other. Since the tip is rubber, it does not damage the interior of the car and is 100 cm long. (3',3")

## Car Opener Lasso-Medium

Code: OM-50

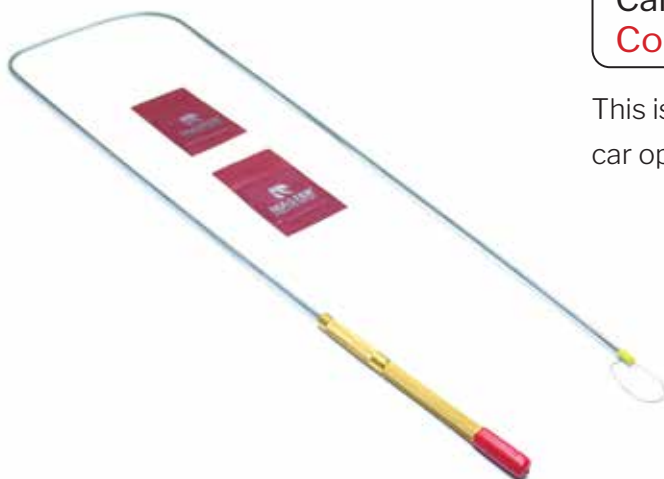

This is 150 cm (4',11") along model of the super flexible lasso car opener.

## Car Opener Lasso-Long

Code: OM-50U

This is 195 cm (6',4") along model of the super flexible lasso car opener.

### Flexible Car Opener-1 mt Code: OM-60K

Made of flexible stainless steel with a length of 100 cm (3',3") It is made for opening vehicle doors with its flexible structure. The design of the tip makes it possible to intervene in car interior door handles and latches. Its wide aluminum handle makes it easier for the locksmith to use.

### Flexible Car Opener-1,5 mt Code: OM-60

This is 150 cm (4',11") along model of the flexible lasso car opener.

### Flexible Car Opener-1,95 mt Code: OM-60U

This is 195 cm (6'4") along model of the flexible lasso car opener.

## Flexible Car Opener w/covered PVC Code: OM-70

It is a very successful product in opening the doors of cars and vehicles. The outer part of the steel is covered with 1 mm thick soft PVC. Thus, there is no need to use a door protective plastic envelope and it does not cause damage to the door paints. It is made of stainless steel with a diameter of 4 mm and is 100 cm (3'3") long.

## Long Flexible Car Opener w/covered PVC Code: OM-70U

The Long Super Flexible Car Opener is for opening the vehicles door. It is a very successful product in opening the doors of cars and vehicles. It is made of stainless steel with a diameter of 4 mm, and the outer part of the steel is covered with 1 mm thick soft PVC. Because of covered with PVC, it does not damage the car door during use. It's 135 cm (4'5") long which very ideal for the job.

## Car Lock Spinner Gun Code: ATL-05

It is for spin a car lock which you need to make two or three turns that you intentionally or accidentally turned in the opposite direction which works for the both sides that is right or left direction. It prevents undesired locking by moving too fast. It is an apparatus that lets the pass pins stay while jumping the car spinner quickly without giving the opportunity to move the pins.

### Car Opening Bars

**Code: OM-01, 02, 03**

It is a very successful product in opening the doors of cars and vehicles. The outer part of the steel is covered with 1 mm thick soft PVC. Thus, there is no need to use a door protective plastic envelope and it does not cause damage to the door paints. It is made of stainless steel with a diameter of 4 mm (0,15") and is 100 cm (3') long.

### Car Opener Thin Rods

**Code: OM-11, 12, 15, 22, 23, 24**

These rods are hook-tipped and are inserted from various parts of the cabin door due to the plastic at their ends and strongly adhere to the rods in the opening mechanism on the cabin door and open the doors. Some of the unlocking mechanisms of car doors work horizontally and some work vertically. These self-opening bars/hooks work successfully in both mechanisms. They are all made of stainless steel.

#### Code: OM-11 Upward Hook

The upward-facing hook makes it possible to interfere with the vertical bars inside the door, behind the glass or in other protected places.

#### Code: OM-12 Backward Hook

The backward hook is an extremely useful tool and is designed to reach the connections under the interior door panel. It is also extremely effective on horizontal connections.

#### Code: OM-15 Long Rod

The thin bar opener makes it possible to rotate the flexible material and to intervene in mechanisms that are difficult to reach.

#### Code: OM-22 Two Way Wide "L" Rod

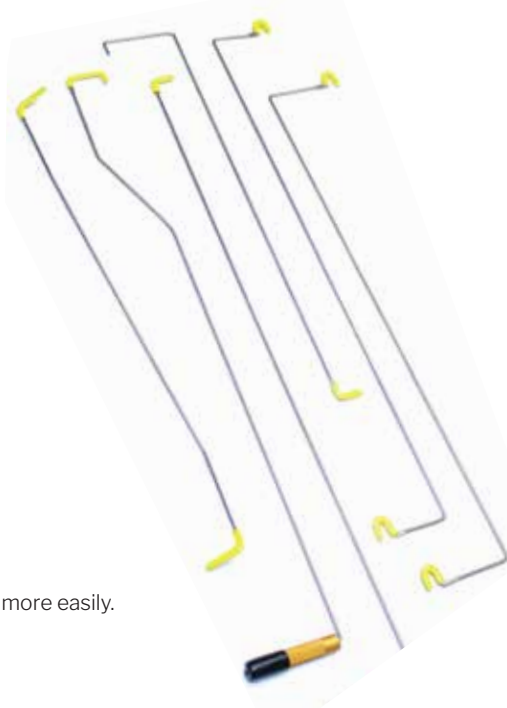

This product is a very useful opener. It is a hook with one end facing up and the other end facing out, which can easily reach vertical connections from above or below. It is special alloy.

#### Code: OM-23 Two Way Narrow "L" Rod

This product of Master is a very useful opener. It is a hook with one end facing up and the other end facing out, which can easily reach vertical connections from above or below. Since it is shorter than the wide double "L" opener, it provides the opportunity to intervene in close mechanisms more easily.

#### Code: OM-24 Short Rod

The thin bar opener makes it possible to rotate the flexible material and to intervene in mechanisms that are difficult to reach.

### Car Opener Thin Rods w/Aluminum Handle

**Code: OM-10, 12u, 13, 24U**

These rods are hook-tipped and are inserted from various parts of the cabin door due to the plastic at their ends and strongly adhere to the rods in the opening mechanism on the cabin door and open the doors. This tool works very successfully in horizontal and vertical working mechanisms.

#### Code: OM-10 Vertical Hook

The vertical hook makes it possible to open car doors with the vertical bars inside the door, behind the glass or in other protected places.

#### Code: OM-12u Long Backward Hook

The long backward hook is extremely useful tool and is designed to access connection under interior door panel. At the same time it is effective at horizontal connections.

#### Code: OM-13 Long Vertical Hook

The backward hook is so useful tool and is designed to access connection under interior door panel. At the same time it is effective at horizontal connections.

#### Code: OM-24 Long Opener Rod

It provides intervention to the difficult mechanism with help of flexible thin opener.

## Ford Tibbe Pick and Decoder

**Code: FOD-9D**

The locks of Ford Transit, Escort and Jaguar vehicles are designed differently from other vehicle locks. With this apparatus, you can open the doors by reading the lock codes. Thus, you can open these brand car doors without using pick and tension with challenging trials. The device intervenes directly from the password to the lock, like a key. The doors of Ford, Jaguar etc. can be opened with this apparatus.

## Ford Car Pick

**Code: FOD-9, 9S**

The FOD-9,9S Car Pick from MASTERPICK is a light weight and easily portable lock pick designed specifically for use on Ford Transit, Escort & Jaguar cars, gaining quick access in an efficient and professional manner.

Features:

- Directly intervenes the lock
- To suit various Ford, Escort & Jaguar vehicles

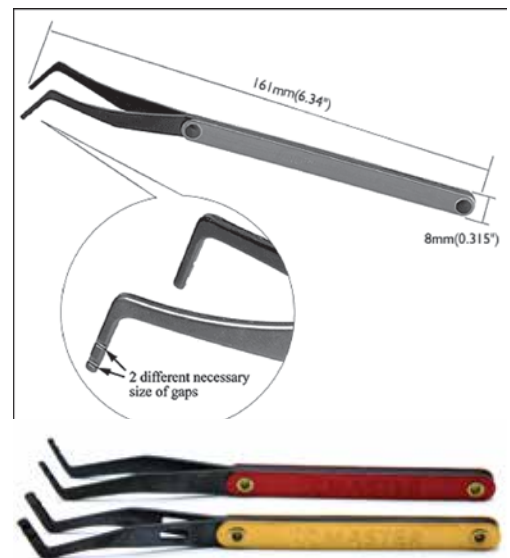

## Vehicle Tension Tweezer Tool

**Code: OKS-02 and OKS-03**

This tension tweezer tools from MASTERPICK are a handy tool of the set to have when working with vehicle locks. Also known as a "car tension", they hold the lock open whilst simultaneously providing tension, making them ideal for the non destructive opening of most wafer locks used in cars and other vehicles. The nail part of this product is narrow and is used in classic auto locks (non-pantograph locks). The tip of the jaw has two differently sized notches to be used with different types of cylinder and the tool is useful for reading wafers, examining keyways for stuck wafers and removing broken keys. Light weight, compact and sturdy with a special hardened steel construction, the car tension tools are an essential addition to the toolkit of any auto locksmith.

Features:

- For use with classic vehicle locks (non-pantograph locks).
- It acts as a tension in the door opening process.
- A non destructive tool

## Lighting Probe

**Code: ASD-60**

It provides great convenience by illuminating the work area with a powerful halogen lamp in all kinds of unlocking operations. Especially when opening car doors, it sticks to the glass with its strong suction cup and you can focus on the area you want to illuminate with its reshaped cable.

## Vehicle Lock Clamp

**Code: OMT-11**

It is used as a training clamp for locksmith masters. It can be mounted on a table or counter very easily. Disassembly and assembly is very quick and easy. Soft plates have been added to the connecting lower and upper jaws of the clamp. Thus, it does not cause any damage to the workbench while assembling. It is also very easy to use. It is produced as a more practical and stylish product than its counterparts.

## Air Wedge

**Code: HY-10**

This Air Wedge is designed to help the opening of car doors in a controlled manner with minimal damage and uses a hand pump to inflate. It allows to open the car doors in a controlled manner with the help of hand pump without damaging the door from the glass seal or the door edge. Due to the evacuation valve, the air can be easily evacuated.

The size of Air Wedge follows: 16,5 cm (width) x 15,0 cm (height) 6,52" x 5,90"

Features:

- Uses a hand pump
- Helps to open car doors in a controlled manner
- Helps prevent damage to car when entering

## U Shaped Air Wedge

**Code: HY-10U**

"U Shaped" Air Wedge is designed to help the opening of car doors in a controlled manner with minimal damage and uses a hand pump to inflate. Thanks to the discharge valve, the air is easily discharged.

Features:

- Uses a hand pump
- Helps to open car doors in a controlled manner
- Helps prevent damage to car when entering

## Wide Air Wedge

**Code: HY-10W**

Wide Air Wedge is designed to help the opening of car doors in a controlled manner with minimal damage and uses a hand pump to inflate. Thanks to the discharge valve, the air is easily discharged.

Features:

- Uses a hand pump
- Helps to open car doors in a controlled manner
- Helps prevent damage to car when entering

## Plastic Crowbar

**Code: PL-15**

You can make a gap between the car door and the car body without damaging the door by squeezing the door with a plastic crowbar. Then you can use the car opener apparatus very well in this gap. Although it is a very light product, it is made of very strong and durable special plastic. Since it is made of plastic material, it does not damage the door during crimping.

## Plastic Car Door Chocks

**Code: TK-01,02**

It is easily attached between the glass seal and the glass or door thanks to its pointed structure. It maintains the gap in the vehicle door until the unlocking operation is completed. Thus, it provides comfortable use of lighting probe and car rods. There are 1 Thick and 1 Thin chocks in the set.

## Protective Envelope

**Code: KZ-01**

Protective Pad is one of the indispensable assistants of vehicle locksmithing. The customer expects does not want the vehicle he wants it to be open to be damaged Therefore, it ensures that the auto bars inserted through the door openings work without damaging the paint of the vehicle. Thus, while dealing with the vehicle, you can concentrate on the work without losing your concentration, as there is no worry of damaging the vehicle. You can use the product by inserting it between the door you will open and passing the tool you want through it.

## Safe Box ElectroPick Gun Set

**Code: KEM-02**

This product, which was designed by Master Pick, was produced as a pick for opening money boxes with the help of a rechargeable gun machine. Our colleagues who are familiar with the subject will better understand how this tool will help them. Thanks to its doubleheaded feature, it is very skilled and fast in opening money boxes that open to the right and as well as to the left. Also, it works very well at doublebit type of locks. P.s: It is produced after pre-order

## Safe Box ElectroPick Blades

**Code: KM-70, 80, 90**

It is used to open steel money boxes made with double-bit type locks. It consists of two interlocking independent parts. The Pick and Tension tool are in one. It is produced from manufacturing steel in one piece on CNC benches in order for the apparatus to be durable. Thanks to the quality of the material used, the life of the apparatus will be quite long. Due to its high quality raw material, it makes the opening process quite strongly, and it is also possible for locksmiths to cut threads on the product in key machines when necessary.

## Jackknife Safe Box Picks

**Code: MSF-08**

This tool, produced in the form of a pocketknife, is an auxiliary tool for safe box picks, and can also be used as a safe pick with the help of a tension. It is used to open the double-bit type of safe box that produced mostly in Turkey. It is very long-lasting because it is made of quality steel material. The pick tips are of standard length. It is produced with foldable blades with a stylish design which specially treated against rust.

## Long Blade Jackknife Safe Box Pick

**Code: MSF-08L**

This tool, produced in the form of a pocketknife, is an auxiliary tool for safe box picks, and can also be used as a safe pick with the help of a tension. It is used to open the double-bit type of safe box that produced mostly in Turkey. It is very long-lasting because it is made of quality steel material. The pick tips are of standard length. It is produced with foldable blades with a stylish design which specially treated against rust.

## Plain Jackknife Safe Box Pick

**Code: MSF-08S**

This tool, produced in the form of a pocketknife, is an auxiliary tool for safe box picks, and can also be used as a safe pick with the help of a tension. It is used to open the double-bit type of safe box that produced mostly in Turkey. It is very long-lasting because it is made of quality steel material. The pick tips are of standard length. It is produced with foldable blades with a stylish design which specially treated against rust.

## Manual Safe Box Pick

Code: KM-11 KM-12 KM-13 KM-14 KM-15 KM-16

These manual picks, which have different blade shapes of each model, can be purchased individually

## Manual Safe Pick Set of 6

Code: KM-601

This set contains six different model of manual safe box picks.

## Manual Safe Pick Set of 4

Code: KM-401

This set contains six different model of manual safe box picks.

It is used to open steel money boxes. It consists of two interlocking independent parts. It consists of six different manual safe pick with the tension and an auxiliary pick apparatus. The manual safe box is designed to open standard and levered safe locks. Pick and tension go together. Therefore, while trying to align the passwords with one independent part, the other independently moving part is used for tensioning. According to the preference of the locksmith master who knows the structure of the lock, the pick ends vary. In order for the product to be durable, it is produced in one piece of steel material on CNC cutting benches. The material purposely chosen to serve for a long time. Since it is produced from steel raw material, the tension is quite strong. The hardness ratio is very well adjusted. Thus, the craftsmen can thread and shape the product as they wish on their own key machines, if they need it.

## Master Electric Strike Door Opener

**Code: BAS-220**

The electric strike door opener system, which operates with 220 volts, is designed for doors that close with a spring latch. When the automatic door buzzer is pressed, it briefly pushes the lock latch forward and holds it for 5 seconds. Thus, allowing the door to open. When the 5-second period is over, it cuts the force it exerts to keep the tongue forward and the door tongue reenters its slot, making your door safe. Unlike its counterparts on the market, this system does not require the mechanism to be opened and re-set like a mainspring. In this way, if no one will open the door when the door buzzer is pressed, your door will be automatically closed after 5 seconds. For the product to work smoothly, the door mechanics must be a problem-free, its installation and electrical connections must be made correctly. We recommend that you seek professional help for installation.

## Master Electric Strike Door Opener w/ 2 pcs Remotes

**Code: BAS-220 K**

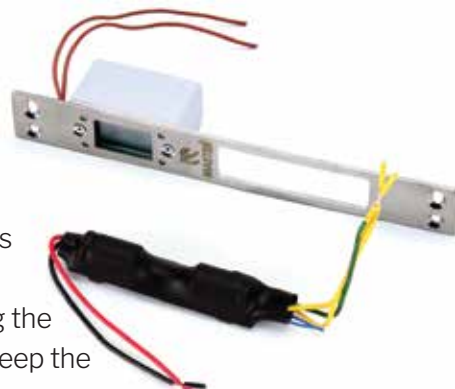

This 220 volt model is added two pieces of remote controls which has been paired with the device.

## Master Electric Strike Door Opener 12-27 volt

**Code: BAS-12**

The electric strike door opener system with two pieces of remote which operates with 12 volts (it works with up to 24 volts) which is designed for doors that close with a spring latch. When the automatic door buzzer is pressed, it briefly pushes the lock latch forward and holds it for 5 seconds. Thus, allowing the door to open. When the 5-second period is over, it cuts the force it exerts to keep the tongue forward and the door tongue re-enters its slot, making your door safe.

## Master Electric Strike Door Opener w/2 pcs Remotes

**Code: BAS-12K**

This 12 volt model is added two pieces of remote controls which has been paired with the device.

## Remote Device for BAS-12 or BAS-220

**Code: BAS-R**

It is produced as a remote control of the Master Smart Opener of BAS-12 or BAS-220. However, it is compatible with all smart controllers. For Master Smart Openers to be used with the remote, this must be the first remote. Because other remotes will not be able to pair Master Smart Openers. After this remote is paired with the Master Smart Opener, it can be duplicated with any available smart remotes if additional duplication is desired.

## Pry Guard

Code: EMK-02

Pry Guard is a security mechanism that can be applied in winged systems such as doors, windows, etc. Two pieces of steel that are installed on the wing and on the frame eliminates the possibility of stretching and opening. It is very easy to install because the edges of the bolts are drill shaped. It can be applied to all kinds of doors, PVC, windows, and aluminum joinery. Additionally, it can be applied to steel and wood doors. Also it prevents doors and windows from sagging over time.

## Master Door Latch Protection

Code: KDK-007

No more cancellation calls that you'll have it while you're trying to reach your service destination. After applied this magnificent product to a customer's door when the door is closed the metal and plastic pieces will be intertwined. Then, the latch will be unreachable to penetrate it by any means. In future if your customer lost the key or else, you will be called to open the door. But, this time you can make sure the service call won't be cancelled while you're heading towards to address. You can convince your customer to apply this protection apparatus to their door by explaining product will stop all the burglary by opening the door latch by mean of plastics or a piece of cans. Your customer will feel and be safe like their door is locked although it might just close. This is an extraordinary product that can be installed easily. When the door is closed the metal and plastic pieces will be intertwined. Then, nobody can reach the latch to penetrate it. So, when you close your door, it will behave like a locked door. Our product is made as self-adhesive. It can be installed without using screw. So, the Master Door Latch Protection is at service of both locksmith masters and its last users.

## Exit Door Pry Guard

Code: EMK-03

This product which has been designed for door that opens outwards is very effective against burglaries. These kind of door doesn't get locked i.e. exit door, fire escape door, etc. So, it would easily get opened by manipulating with a lever or any metal stick. This Pry Guard prevents outward doors from being pried open. The installation of our product is very easy with self tapping screws which come with the product. There is no need for extra attention after installation, closing the door will be enough.

## Hygienic Door Handle Set

Code: HDH-01

Covid-19 still effect our daily life since it began. Major concern of people is not to contact each other. The main hesitation of preventing contact by somebody else is holding the door handle. Because of this concern some people is trying even funny things to not touching the door by their own hand. You can now open doors without the need to touch with your hands. After installing this hygienic door to your regular door handle, you can use your elbow instead of your hand. It is made of good quality aluminum material. It can be used on any door handle with ease. This product is sold as two pieces: the interior and exterior handle. But, it can be bought separately, as well.

## Master Steel Rosette with 6 screws

**Code: MCR-06**

It can be installed in 2 minutes! This new patented product has a feature which is a unique method which is having great support from the cylinder. It can be easily installed. It is very strong product since it has 6 pieces of smart screws (self-drilling screw) which are included in the package.

### Installation:

Master Rosette consisted of 2 (two) smart screw. The lower part of the Master Rosette is screwed to the door while the cylinder is mounted on the door. Before installing the top lid, the lock is removed from its slot. After the top lid is screwed for installation, the demounted lock cylinder is mounted again. Thus, the lock cylinder prevents the top part from being demounted by screwing it.

## Namable Steel Badge for Special Requests

**Code: MCR-06N**

Easy installation in two minutes!

Our new patented product has a feature that can be easily installed. It is very strong product since it has six screws. The six pieces of smart screws (self-drilling screw) are included in this package.

- Text or logo can be written according to your request.
- The minimum order amount must be 60 pieces.

### Installation:

Master Rosette consisted of 2 (two) smart screw. The lower part of the Master Rosette is screwed to the door while the cylinder is mounted on the door. Before installing the top lid, the lock is removed from its slot. After the top lid is screwed for installation, the demounted lock cylinder is mounted again. Thus, the lock cylinder prevents the top part from being demounted by screwing it.

## Patented Cross Lock w/3 keys

**Code: FK-L3**

Cross Lock is designed to operate with the patented key design of MASTERPICK and the Master Cross-lock Steel Rosette. It can only be opened by the cross-lock keys that are custom made. The patented key design of the special cross lock is designed to work with the Master Cross-lock Rosette. The lock part is the standard cross lock.

## Patented FAYN Blank Fiam Key

**Code: FK-BL**

This special star (Fiam) blank key is for FAYN branded star (Fiam) Locks. This key's body thinner than the regular star blank keys.

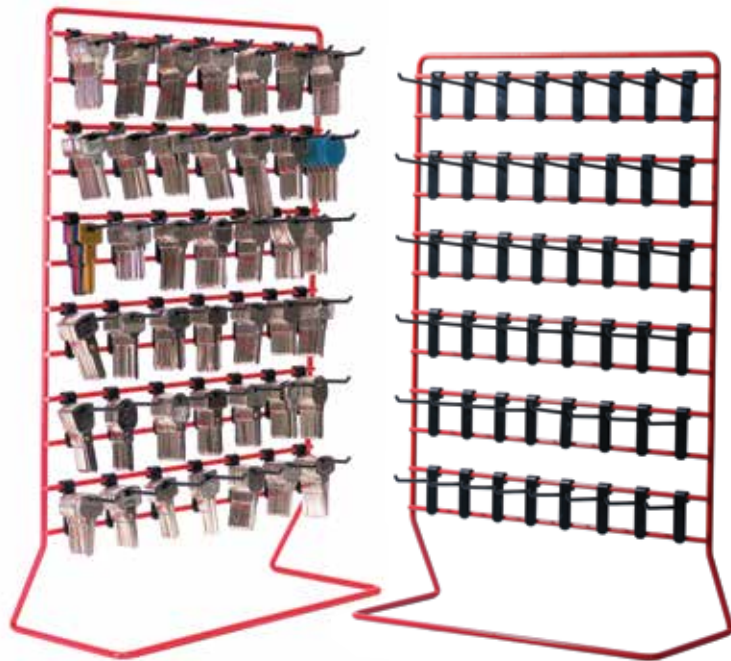

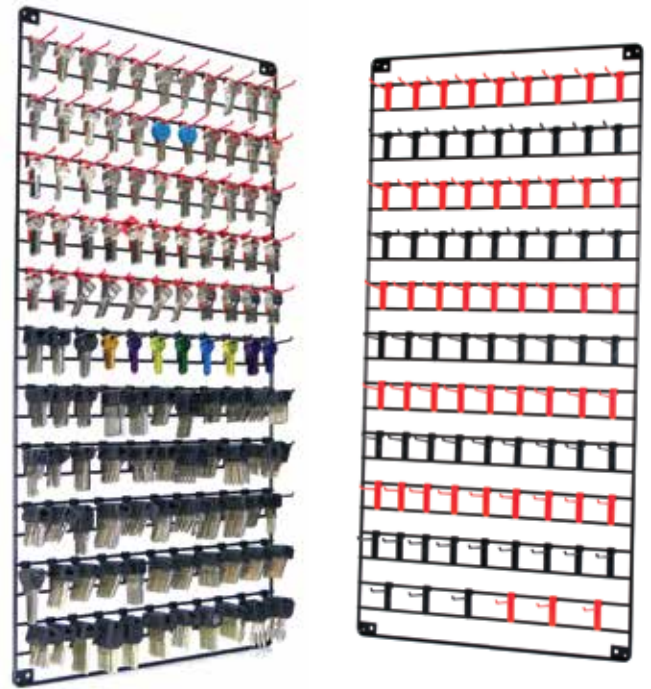

### Wall Key Stand

Code: MKS-100

MASTERPICK has created a highly specialized stand for store owners. The most important design for locksmith shops is to display various types of blank keys visibly. Otherwise, it can be challenging to find the blank key we are looking for among various types of keys. Some locksmiths solve this problem by placing plates on walls and placing nails and screws at certain intervals. They can display all their key stocks by hanging various keys on these nails. But this system is very tiring. Once installed, it is never possible to make any changes to it. This product eliminates all problems. It is a modular product designed in dimensions of 50 x 100 cm (1'7"x3'3") It comes with 100 plastic hangers that you can place according to your own preference. Two color options are available: black and red. The stand with black plastic hangers is provided with the red stand, and the stand with red plastic hangers is provided with the black stand. It is easy to use and provides great convenience to store owners.

### Counter Top Key Stand

Code: MKS-50

It is a modular product designed in 35 x 55 cm (1'2"x1'9") dimensions. It comes with 50 plastic hangers that you can place according to your own preference. It is available in two color options, black and red. While red plastic hangers are supplied with the black stand, black plastic hangers are provided with the red stand. Easy to use and provides great convenience for shop owners.

### Plastic Key Stand Hook

Code: KH-01

It is made of plastic ABS raw material. It's elegant and useful. There is black and red version of it. We recommend picking a color according to vice versa of color of the stands.

## Keyhole Shim of Steel

**Code: BDG-F**

It is produced as a replacement for the broken or broken shim of steel badges. It is of a universal scale. It is suitable for most steel rosettes produced in the market.

## Micrometer

**Code: MIK-10**

It is a product that can make analog measurements. The micro meter instrument measures with an accuracy of 0.01 mm. Thanks to its special structure, it can measure the depth of the pit. Thus, it provides the opportunity to measure the password depths (of ball keys). You can reset the measurement screen wherever you want. Thus, you can make a much more precise measurement.

## Battery Powered Digital Calliper

**Code: KP-10**

One of the tools that every locksmith finds important is the caliper. This is a digital and battery powered Calliper for having a precise surement.

Four measuring modes: This digital caliper can be used to measure inside and outside diameter, depth and step with two sets of jaws and a probe.

Measurement range: 0 – 150 mm Resolution: 0,1 mm Accuracy:  $\pm 0.2$  mm

Zero setting function: The smart design allows you to set zero with an easy touch of a button and start a new measurement at any point of the scale, ideal for differential measuring Large LCD screen & auto off: The large and easy-to-read LCD display helps you get precise results quickly and easily, auto shutdown for saving battery after 5 minutes if without operation.

## Zembil Sharpening Machine

Code: Z-4X4

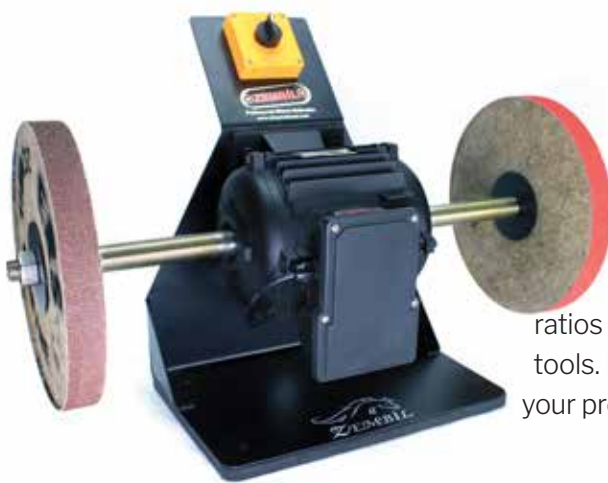

This is a machine that has many uses as it can sharpen various tools by attaching them to the machine using discs of different sizes. It's designed for sharpening activities such as cutting, chopping, drilling, and shredding. This machine is great for professionals who do sharpening jobs frequently. It works particularly well for butcher knives, sheep shearing knives and combs. Moreover, this machine can also do dry sharpening with ceramic sandpaper and comes with two spare abrasives and deburring polishes. It has a total weight of 30 kg (66 lb) and has twin engines, one is 0.75 kW and the other is 0.25 kW.

## Zembil Sharpening Machine

Code: Z5-60

"The preference of the professional sharpener master" It is a multi-functional sharpening machine. Many apparatus can be inserted to it. It is compatible to the disks that have different ratios and widths. You can sharpen any kind of driller, cutter, shredder tools. It can do a dry sharper with ceramic sandpaper. When desired, your product can be sharpened by immersing it in water and cooling it.

## Zembil Sharpening Machine

Code: Z5-35

It can do a dry sharper with ceramic sandpaper. When desired, the tool can also be sharpened by immersing it in water and cooling it during sharpening. A product that you can work with no interruption. So, it is ideal for shop owners. Two spare sandpaper and deburring polishes are supplied with this product.

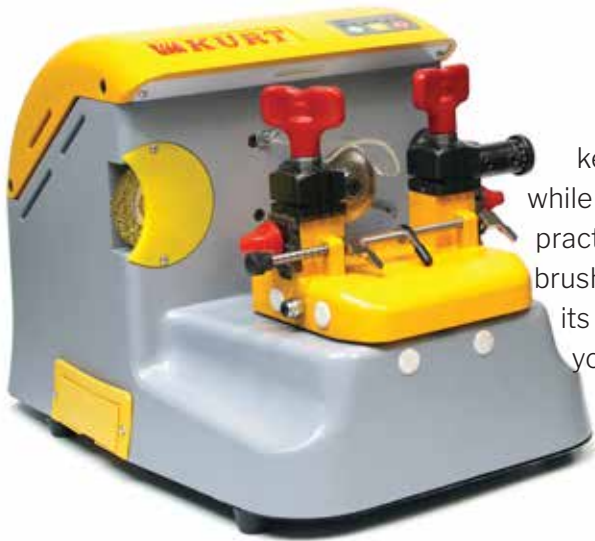

## Zembil Knife Sharpening Machine

Code: Z5-H

It can do a dry sharper with ceramic sandpaper. When desired, the tool can also be sharpened by immersing it in water and cooling it during sharpening. This product is ideal for individual and hobby use. However, its performance may degrade when used heavily. We do not recommend it to those who will engage in commercial activities. Two spare sandpaper and deburring polishes are supplied with this product.

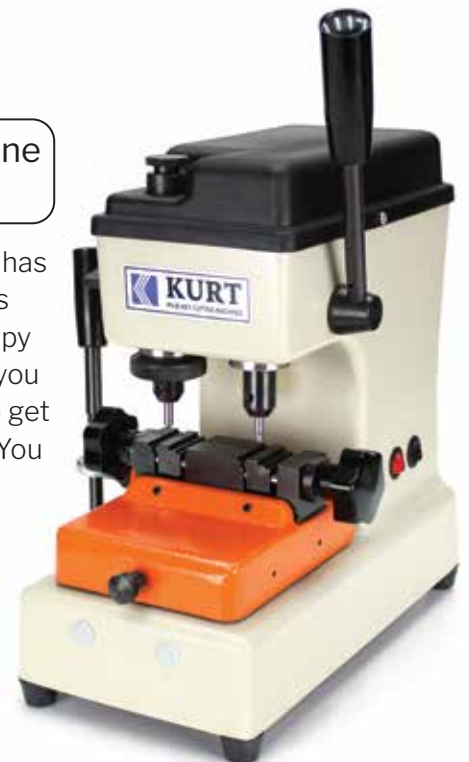

**Full Automatic Key Cutting Machine for Yale Type**  
**Code: YM-75**

It copies automobile keys, Yale type house keys and cross lock keys automatically. It works rapidly and provides the same velocity while moving forward and backwards. Also provides you to get a result practically. Deburring works on the cutting part together with the wire brush, preventing you from wasting time. It leaves you no doubt about its sensitivity. With this model of the KURT machine that coded YM-75, you can be assured that you will get a result both economically and practically. You can easily teach it to your employees and cut any kind of key with no need of individual skills.

**Kurt Machine Pantograph and Dimple Key Cutting Machine**  
**Code: PN-80**

This machine works on the side evenly and vertically. It has a clamp that has a micrometric sensitivity and a body that prevents vibration. The sledges which carry the clamps are upon a delicate steel miller. You can easily copy both pantograph and the dimple keys without changing the clamps. So, you can open the channels on the auto keys with this item. It provides you to get a result practically and rapidly. The tips of the pantograph are sensitive. You can focus even the slightest details with its lamb. It prevents you from spending so much time to your progression. With this new model of the Kurt Machine Pantograph and Dimple Key Cutting, you can be sure you will get a good result either economically or practically. In addition, it provides ease of processing the back (upright) parts of the keys. The PN-80 pantograph key cutting machine works on a high-standard precision vice for vertical and flat milling, a balanced body that prevents vibration, a steel shaft and ball for bearing the vices. Ball spanners and pantograph keys are easily and seamlessly connected in vices. It has lighting for working in unlit environments.

**Semi-automatic Machine with Lamp and Brush for Yale Type**  
**Code: YM-35**

The machine works rapidly and provides the same velocity while moving forward and backward. Also provides you to get a result practically. Deburring works on the cutting part together with the wire brush, preventing you from wasting time. It leaves you no doubt about its sensitivity. With this model of the KURT machine that coded YM-35, you can be sured that you will get a result both economically and practically. You can easily teach it to your employees and cut any kind of key with no need to individual skills.

## Pin Sets

Code: PP-24

There are up to 4.200 pins in various measurements. The top and the bottom pins are consisted with the master pins and the pin springs. In this set, there is a Cylinder Removal Saddle. These pins are used for master making.

## Super Light Tube Puller Head

Code: HX-00

It is the main tool of the tube puller set and is used to break the core of the locks with the help of a special screw. Specially produced steel pulling screws are used with the lock tube puller. The tube pulling method is a real solution for locksmiths which is known as the most effective and ideal locksmith method for door locks with badges. This special tool (profile, round and oval) allows all kinds of lock cores to be removed easily and without damaging the door. This tool; It can be used in Dimple or German cylinders as well as half cylinders. It can be used very easily on steel, wood, aluminum or plastic doors. It is very effective in cases where emergency opening is required.

## Palm Size Tube Puller Head

Code: HX-03H

It is the head part of the super light Compact Tube Pulling set (HX-03). It is designed to fit in a palm for easy to use. It works perfectly to pulling the lock core with help of special pulling screws. The head is produced of special aluminum material. So, it looks very elegant and doesn't cost you too much weight. The tube pulling method is a real solution for locksmiths which is known as the most effective and ideal locksmith method for door locks with badges. This special tool (profile, round and oval) allows all kinds of lock cores to be removed easily and without damaging the door. This tool; It can be used in Dimple or German cylinders as well as half cylinders. It can be used very easily on steel, wood, aluminum or plastic doors. It is very effective in cases where emergency opening is required.

## Cylinder Breaker's Head

Code: 35L-H

It is the head part of the super light Cylinder Breaker set (KIR-35L). This head uses a 6L hex key. The apparatus is made of hardened steel and its mouth is designed as a key cylinder. Thus, it wraps around the cylinder of the door lock and grips the cylinder very tightly when the screw on the side is tightened. Thanks to the specially designed sharp channels on the inner walls of the part holding the cylinder, it has been made suitable for applying force without stripping the cylinder.

## Power Cracker & Tube Puller

Code: 35X-H

It is a patented product designed by MASTERPICK and is the main tool of the Dual Function Breaker set. It combines both the cylinder breaking and tube pulling functions in a single body. Thus, locksmiths do not have to take separate tools when going for the unlocking service.

### Rosette Cracker Head & Disc

**Code: RKP-3HD**

The Rosette Crusher is comprised of two essential components: the Breaker Head and the Adjustment Disc. The outer portion of the Adjustment Disc is fashioned from a specially formulated aluminum alloy, while the inner layer is constructed from steel. Meanwhile, the Rosette Breaker is skillfully crafted using top-quality materials and features a unique, protective covering. This component grasps the inner edges of the rosette hole, and with the help of the Adjustment Disc with a few vigorous shakes, the Rosette Breaker will crush and destroy rosette screws, allowing for easy removal.

### Rosette Crusher Adjustment Disc

**Code: MK-D**

This an auxiliary product that has most helped the Rosette Crusher succeeds. The outer part is made of special alloy aluminum, and the inner part is made of steel. Since it is designed to be very light, it provides convenience to key makers and locksmiths. The Rosette Crusher, which passes through the adjustment disc, fits into the ruffle slot. It is fully clamped to the rosette on the door thanks to the rotation of the disc and the contra-compression of the Rosette Crusher. Due to this rotating clamping feature of the adjustment disc, the steel rosettes on the doors can be easily removed from their screws.

### Rosette Crusher Head

**Code: MK-03**

It is designed to tear off steel rosettes. It is made of special steel. The handle part and Allen key can be used together with the KIR-35 and BK-40 Breaker. In addition, since it is designed to be very light, it provides convenience to key makers and locksmiths. It grasps the ruffle slot in the badge well. Thanks to the special counter screwing head, it is fully clamped to the rosette. Thanks to its strong gripping jaw and arms, it easily breaks the steel badge from its screws.

### Tube Pulling Abutment Disc

**Code: DCP-01**

Tube pulling requires skill and precision to ensure that the lock is not damaged during the process. It is particularly useful when dealing with high-security locks that cannot be easily picked by other means. The Abutment Disc held the cylinder steady while the locksmith to pull lock core off. Overall, tube pulling is a valuable technique that locksmiths use in situations where other methods have failed. With the right tools and expertise, a locksmith can use this procedure to open even the most stubborn locks without causing any damage to the door.

## Aluminum Handle

Code: MHN-20

The handle of various cylinder snapper or crusher made hardened aluminum compound. It can be used commonly with many of Master Pick breakers. It's a lightweight product which provides ease of using.

## Round Cylinder Breaker's Head

Code: BK-26H

This tool is for round locks with a diameter of  $\varnothing$  26 mm (1") This super light cylinder cracker made of hardened steel. You can easily break the round lock cylinders with this apparatus. By squeezing the side screw strongly, the cylinder is broken and broken by shaking

## Round Cylinder Breaker's Head

Code: BK-32H

This tool is for round locks with a diameter of  $\varnothing$  32 mm (1,25") This super light cylinder cracker made of hardened steel. You can easily break the round lock cylinders with this apparatus. By squeezing the side screw strongly, the cylinder is broken and broken by shaking.

## Round Cylinder Breaker's Head

Code: OV-35H

You can easily break round lock cylinders with this apparatus. It is tightened strongly from the side screw, taking it out of the lock cylinder. It is a spare part of OV-35 set.

## Bit Holder Adaptor

Code: BTA-05

Universal magnetic bit holder for use with 6 mm hexagonal drive screwdriver bits. Strong & corrosion resistant stainless steel sleeve. Magnetic base and c-ring securely retains the bit in place.

### Spare Air Wedge Pump and Valve

Code: HY-10PV

It is the spare pump and valve of the Air Wedge which allows the doors to be opened in a controlled manner without damaging it with the help of a hand pump by passing it through the duct or door edges. Due to the discharge valve its air can be easily discharged. Air inflation pump also provides you can inflate with the special rubber pump. It is a product with a capacity and quality that will allow you to make thousands of inflations and evacuation.

### Orion Lithium Ion Battery-5C

Code: P-18650

Orion 18650 Lithium Ion Battery is a rechargeable 5C battery.

Voltage: 3.7 volts

Capacity: 15000 mAh

Size: 65mm x 18mm

What is a Lithium Ion Battery?

(3.7 volts) They are frequently preferred in new technology devices.

The biggest feature is that they are small and light, with high current and high voltage. Li-Ion batteries can be kept waiting after being charged like Ni-Cd batteries and they do not lose capacity in a short time. It is a dangerous type of battery in misuse. Since Lithium Ion batteries contain high capacity, they must be carefully charged and protected. They should never be exposed to direct sun and should not be opened. There is a risk of explosion and fire when opened. It should be kept away from children.

### Industrial Mini-Engine

Code: STD-M1

It is a standard mini-engine that can be found in many hand tools and used in universities and institutions that make other mechanical R&D's, and many other industrial purposes. Size: 35,8 x 50 L. Shaft  $\phi$  O.D. 3.175 mm. Fundamental Structure: secd dwelling / Plastic tipped cover Application: Vacuum cleaners / Air pump / Power tool / Electrical Model Toys/ Ironmongery Group / Industrial Products Weight: Approximately 150g.

### "T" Wrench for Manual Dimple Pick Key

Code: MBT-11

It is a tool which needed to operate dimple lock pick key by manually. In fact, the pick key holder must be attached to this tool before sliding in the pick key. It has hexagonal bed for holding the pick holder.
